LVS training facility for winter sports enthusiasts

LVS Training Facility for Winter Sports Enthusiasts

Proper tour planning and cautious behavior in alpine terrain can significantly reduce the risk of avalanches. However, in the event of an emergency, **quick and confident action is crucial**—knowing how to properly use an **avalanche transceiver (LVS device)** can save lives.

To help winter sports enthusiasts train effectively in a realistic environment, a modern **LVS training facility** has been established on the **Tschengla Plateau**. This project was realized in cooperation with the Alpine Club Vorarlberg, the local mountain rescue teams of Bludenz, Brand, and Nenzing, the Nature Friends Vorarlberg, FIRMALPIN, Bergbahnen Brandnertal, and Bürserberg Tourismus GmbH.

Location

The avalanche training field is **located just past the Tschengla hiking parking lot**, heading towards Alpe Rona on the left side. It is easily accessible.
